BRAY / McCANNA LOK
41R High Performance Valves for the SUGAR INDUSTRY

- Steam Valves for Evaporators
- Evaporator Steam and Escape Valves
- 100% Bi-directional Bubbletight
- Large Cv
- Easy Automation
- Award-winning Design
- Lighter Weight
BRAY / McCANNALOK 
SERIES 41 R 
EVAPORATOR STEAM VALVE

Zero Leakage Butterfly Valves
- 100 PSI Rated
- Double Flanged Design
- -20°F to 500°F (-29°C to 260°C)
- Zero-Leakage, Bi-directional Shut-off to full rated Pressure

Bray Controls is proud to offer the Bray/McCannalok line of specially designed high performance butterfly valves for the Sugar Industry. These valves are structured to handle the low pressure steam of evaporators. This is also the same valve that for 30 years has proven to be the leader in double offset design for the process industry.

This valve incorporates the same proven design features of the standard Bray/McCannalok valve but in a lighter, more economical configuration specifically designed for the sugar industry steam services. It can be used along with the standard higher pressure Bray/McCannalok butterfly valves and shares the same spare parts, thereby reducing the need for special or different inventory.

The Bray/McCannalok’s unique, patented design received Chemical Processing’s Vaaler Award for Best Product shortly after it was introduced. The simple, innovative design offers rugged reliability and extremely easy maintenance in the field. Independent and internal tests have proven Bray/McCannalok’s superior service life capability, with zero-leakage shut-off through over 100,000 cycles. The Bray/McCannalok valves can be easily automated with manual, pneumatic or electric actuators.

After a test of over 100,000 cycles at 720 psi, the seat remained in excellent condition, continuing to provide a bi-directional zero-leakage seal. Even after more than 878,000 cycles at 2 psi, the Bray/McCannalok High Performance Valve still sealed zero-leakage in both directions.

**DOUBLE OFFSET STEM AND DISC DESIGN**

For over 30 years the reliability of the Bray/McCannalok has been conclusively proven, both in lab tests and thousands of field applications.

**SEAT DESIGN:**
THE HEART OF THE BRAY/MCANNALOK VALVE

The unique, two-part seat assembly consists of a resilient energizer which is totally encapsulated by the seat. The assembly is locked in the body recess by a full-faced seat retainer. This simple, reliable and proven combination results in many exclusive advantages including:

- The energizer is completely isolated from all contact with the line media by the seat.
- Serrations in the seat retainer and body recess secure the seat assembly in place regardless of disc position.
- The full-faced retainer is bolted to the body, locking the seat in the correct position. The seat is secured even without the mating flange.
- The closely confined and well supported seat is energized by the disc and line pressure. The higher the pressure, the tighter the seal. In low pressure and vacuum applications, the energized seat offers superior sealing and longer service life than many other designs.
- Line media is sealed to zero-leakage in both directions.
- The seat is self-adjusting for wear and temperature changes.
- Seat replacement is extremely easy. Just remove the seat retainer, rotate the disc into the closed position and place a new seat assembly in the machined recess of the body. This simple procedure will not disturb the disc or stem.
### Materials of Construction
