THE HIGH PERFORMANCE COMPANY

SERIES M1

High Performance Severe Service Metal Seated Ball Valves

Bray's High Performance Series M1 Severe Service Metal Seated Ball Valves are suitable for the harshest applications. The M1 Severe Service Ball Valve offers customizable, engineered-to-order solutions to fit unique and specific applications.

Each M1 valve is engineered for the customer's specific application and is backed by a specialized and trained service department.

Bray's Severe Service Ball Valve engineers offer years of experience to provide industry leading technical sales support. Since the early 1980's, Bray has successfully provided product solutions and performance improvements for our customers.

The M1 is designed with features and improvements to overcome common severe service challenges, while outperforming and outlasting other metal seated ball valves on the market. Bray is dedicated to continuous improvement and innovation in design to meet our customer's technical and commercial needs.

Bray's global operations allow for the production of technically advanced valves, designed with the highest quality and workmanship, at competitive pricing.

SERIES M1

Quality, Safety And Performance

Bray's Severe Service Division provides high quality designs and manufacturing focusing on professional customer service. As a result of our continual commitment to quality, our facilities have achieved ISO 9001:2008 for the design and manufacture of severe service ball valves.

We recognize that the safety performance of our product is critical to our customers, therefore, all major part components are traceable to reassure our customers of consistent reliability throughout its life cycle. Our Severe Service products are certified to the requirements of Annex III, Module H of the PED 2014/68/EU.

At Bray we understand that safety correlates to our success and that sound health, safety, and environmental practices are the foundation of successful business management. Safety is an integral part of the Bray core values and we aspire to eliminate any potential work place injuries or harm to the environment through the manufacturing and use of our products.

INDUSTRIES SERVED

REFINING

Heavy Oil Upgrading and Hydrocracking

- > Catalyst Addition & Withdrawal
- > Pump Isolation
- > Overhead Vapor Isolation & Control
- > Low, Medium, & High Control Letdown Stations

Delayed Coking

- > Coke Drum Feed and Bypass Isolation
- > Overhead Vapor Line
- > Cutting Water Pump Isolation
- > Steam Stripping, Quench Water and Drain Valves

Reforming (CCR)

- > Catalyst Lockhopper Isolation and Vent
- > Regenerator Isolation
- > Catalyst Addition/Withdrawal

Fluidized Catalytic Cracking (FCC)

- > Catalyst Handling
- > Slurry Isolation and Control Steam
- > Regeneration Dump
- > Heavy Oil
- > Flue Gas
- > Cyclone

POWER GENERATION

- > Above & Below Seat Drains
- > Ash Handling
- > Attenuator/Desuperheater Spray Block
- > Boiler Drains
- > Boiler Feed Pump Isolation

- > Continuous Boiler Blowdown
- > Recirculation
- > Feedwater Isolation
- > Main Steam Stop
- > Soot Blower

- > Startup Vents/Drains
- > Steam Dump
- > Turbine Bypass Systems
- > Turbine Drain

MINING

High Pressure slurry transportation systems

- > Pump Discharge Isolation
- > Pipeline Isolation Stations
- > Instrument Isolation
- > Vents & Drains
- > Pigging Stations
- > Choke Stations
- > Concentrators

Pressure acid leach & Pressure oxidation

- > Acid Injection
- > Feed Pump Isolation
- > Oxygen Injection
- > Blowback Vessel Isolation
- > Steam Injection
- > HP Water Injection
- > Oxidized Slurry Isolation
- > Slurry Drains & Vents
- > Autoclave Isolation (Feed/Discharge)

CHEMICAL/PETROCHEMICAL

SYNFUELS

- > Coal Gasification
- > Coal Liquefaction

FEATURES & BENEFITS

FEATURES

- 1 BALL-TO-SEAT INTERFACE:** Wide sealing surfaces lower dynamic contact stress between the ball and seat during operation and extend the valve's life cycle. These sliding surfaces utilize qualified hard coatings for specific applications.
 - > **QUALIFIED PROPRIETARY COATINGS:** Maximum sealing life achieved through widest sealing surfaces and advanced coating technology.
 - > **SEALING SYSTEM:** Series M1 valves feature trims that are designed to isolate flow direction (unidirectional) and/or reverse flow direction (bidirectional).
- 2 SEAT SPRING:** The large seat spring energizes the ball and seats to create a tight seal at low pressure and compensates for thermal expansion of the seat and ball during thermal cycling.
- 3 LOCKING RING (R100/R200):** A large locking ring stabilizes and locks the seat in place. The ring provides a uniform load around the seat ring to maintain a consistent seal with the valve body.
- 4 BLOWOUT-PROOF STEM:** Features a highly corrosion resistant super alloy, blowout-proof, one-piece stem design. The stem is designed to meet the requirements of API 608 and API 6D.
- 5 INNER STEM BEARINGS:** Multiple inner stem bearing rings are used as thrust washers for rotational movement. Ultra-hard, gall resistant thermal spray coatings are available to maximize the bearing service life. The stem bearings are flat-lapped to provide low friction operation.
- 6 ZERO EMISSION LIVE LOADED PACKING:** Zero emission packing rings reduce the carbon footprint of the M1 in conjunction with Belleville washers that compensate for packing compression fluctuations during temperature and pressure swings.
- 7 BUSHING RETAINER:** To eliminate stem side loading during valve cycling caused by the operator, the bushing retainer and outer stem bushing (8) maintain concentric alignment of the valve stem.
- 8 OUTER STEM BUSHING:** Gall resistant materials to withstand high cycles.
- 9 MOUNTING FLANGE:** A large, robust mounting flange is built into the valve body to support heavy operators, and is critical to the drive train sealing feature.
- 10 VALVE CONSTRUCTION:** Series M1 valve bodies are offered in both forged and cast material grades to meet or exceed specifications. Available in two piece or three piece construction.
- 11 WALL THICKNESS:** Series M1 valves are designed to have additional corrosion allowances that exceeds ASME B16.34 minimum requirements to ensure the highest safeguards against corrosive and erosive service environments.
- 12 BODY JOINT:** The bolted connection is designed to meet and exceed ASME Section VIII, Div 1, Appendix 2 and ASME B16.34 criteria.
 - > Series M1 valves rated up to ASME 1500 utilize a large cross-sectional spiral wound gasket.
 - > Series M1 valves rated ASME 2500 and higher utilize our proprietary seal ring.
- 13 VALVE BORES:** Bore sizes are based on ASME B16.34 Appendix A Table A-1. Custom or reduced bore sizes are available.
- 14 STEM KEYS:** Drive keys are engaged in a 'closed' keyway slot to eliminate disengagement from the valve stem and are positioned in-line with ball bore (flow path).
- 15 END CONNECTIONS:** Series M1 valves are available in raised face, ring joint, butt weld, socket weld, and hub-type configurations.

SPECIFICATIONS

Valve Design	ASME B16.34 ASME Section VIII - Div 1, Appendix 2
Sizes	1/2 - 36 in. (DN 15 - 900) Custom and larger sizes available upon request
Pressure Ratings	ASME 150 - 4500 Custom and higher pressures available upon request.
Temperature	Standard design rated up to 1100 °F (593 °C), can be customized for higher temperatures
End Connections	Raised Face and Ring Type Joint (ASME B16.5 and EN 1092/ISO 7005) Butt weld (ASME B16.25) Hubs Socket weld (ASME B16.11) Custom Ends available
End-To-End	ASME B16.10 (Long Pattern) Custom End-to-End available upon request.
Testing	API 598, ANSI/FCI Class VI, MSS SP-61 Custom tests available.
Certifications	PE(S)R UKCA S.I. 2016:1105

Bray's Series M1 offers application specific sealing systems, providing customized solutions for long-term isolation and low maintenance operation.

R100

- > Unidirectional full rated sealing with preferred flow direction¹.
- > Derated sealing in non-preferred direction².

High Pressure Side (HP)

R200

- > Unidirectional full rated sealing with preferred flow direction¹.
- > Derated sealing in non-preferred direction².

High Pressure Side (HP)

M100

- > Bidirectional, full rated sealing with preferred flow direction¹.

Preferred High Pressure (HP) Side

Model	Sealing System			Seat Characteristics	Media Use
	Unidirectional	Bidirectional	DB&B		
R100	•			Solids resistant design, low to high temperature	Light to Medium Catalyst Slurry Saturated and Superheated Steam General Hydrocarbons Pressure Acid-Leaching Pressure Oxidation Services over 450°F (232°C)
R200	•			Solids proof design, low to high temperature	Heavy Catalyst Slurry Fouling Hydrocarbons Coking
M100		•		Solids resistant design, low temperature	Slurry Transport Erosive and Abrasive Pressure Acid-Leaching Pressure Oxidation Services under 450°F (232°C)
M120		•	•	Solids resistant design, double-block and bleed system, low temperature	Slurry Transport Erosive and Abrasive

¹Marked on valve and detailed in order specific drawings.

²Contact Bray Engineering for derating details.

Double Block and Bleed available upon request for Model M120.
