

FLOW-TEK MICRO PURE SERIES S7500 | S7700

3 Piece Tube Bore Ball Valves

HIGH PURITY APPLICATIONS

Flow-Tek's Micro Pure Series ball valves have been specifically designed to meet the requirements of high purity applications in accordance with ASME BPEa specification. All valve bodies are investment cast CF3M (316L) stainless steel with an internal surface finish of 15 Ra with 20 Ra maximum per SFV-1. Other grades of surface finishes, including electropolishing are available. Cavity fillers and purge ports are also available upon request.

Tube Bore The ball and end connections of all Micro Pure Series valves have the same I.D. dimension as the mating tube system. These valves offer smooth flow characteristics with minimal pressure drop and full drain capability.

Processing To prevent component contamination, Micro Pure Series valves are solution cleaned, assembled and bagged to allow for use in high purity systems.

Size	Steam Rating	Temperature Range	Pressure Rating	End Connections	Body Material
1/2" to 4" 8mm to 100mm	150 psi WSP 10.3 bar	-50°F to +450°F -46°C to +232°C	1000 psi WOG 69 bar <i>(Dependent on end connection selected.)</i>	Quick Clamp Extended Tube End SAE Male <i>(End connections are interchangeable within the Micro Pure Series)</i>	Stainless Steel

FEATURES AND BENEFITS

BALL

Flow-Tek balls are precision machined and mirror finished for bubble-tight shut off and reduced operating torque.

SEAT

Flow-Tek's unique seat design ensures bidirectional sealing while providing the lowest possible torque.

SEAT SELECTION

Optional seat materials, such as TFM 1600, are available to meet most applications, with the standard seat being Virgin PTFE. Optional seat designs, such as Cavity Fillers, are also available upon request.

BODY

1/2" - 4" valve bodies are investment cast stainless steel and all bodies are solution annealed for the highest quality and added strength. All body castings are marked with a foundry heat number for full traceability. The three piece body design offers many advantages, including installation flexibility, elimination of the need of flanges, and ease of in line or out of line servicing.

BODY HINGES

Two heavy duty body bolt hinges, throughout the entire size range, provide positive alignment of body to end connection during in-line servicing.

END CONNECTIONS

The Micro Pure Series features two standard interchangeable end connections; Quick Clamps for ease of installation and Extended Tube Ends for weld-in-place service.

SECURE MOUNT

A unique standard feature is an integrally cast top flange that ensures positive actuator mounting. Flow-Tek's Secure Mount eliminates unwanted actuator movement during high cycle or continuous duty applications. Actuation equipment can be easily and safely removed while the valve is under full line pressure. The Secure Mount through 2" valve sizes is in compliance with ISO 5211 bolting pattern standards.

HANDLES

1/2" - 2" manually operated valves feature as standard a Safety Trigger to prevent accidental movement of the valve handle. The trigger locks the handle in the open or closed position. The handle lock can be overridden, if needed, with a small bolt through the handle in the release position. An oval handle is also available as an option.

PADLOCK

A padlock can be added to secure the handle in position, preventing unwanted access. Available as standard on all valve sizes.

SMART STEM ASSEMBLIES

Flow-Tek manufactures heavy duty, high quality stems. All Flow-Tek stems are internal entry and blowout proof for maximum safety. Micro Pure Series valves feature strong, large diameter stems with live-loaded, self-adjusting primary and secondary sealing. Utilizing Belleville washers, the stem seal automatically adjusts to compensate for changes in temperature and normal wear. The assembly is secured by a saddle-type lock washer, preventing unthreading of stem nuts in high cycle automation applications.

STEM SEALS

The Thrust Washer provides the primary seal while the live loaded Stem Packing creates a multiple secondary seal between the stem and body. The stem packing is also composed of PTFE providing high purity protection and high cycle life. This dual stem seal arrangement is a Flow-Tek exclusive.

DOUBLE LOCK NUT DESIGN

Standard on the Micro Pure Series, the double lock nuts with tab lock washer allow handles to be easily and safely removed while the valve is under full line pressure.

SPECIFICATIONS

Valve Sizes 1/2" through 4"

Valve designs are in accordance with ASME BPEa High Purity Valves.

Valve bodies and end connections are high quality investment cast and solution annealed. Body shell wall thickness complies with ASME B16.34.

BPEa compliant with <3% ferrite and .005 to .017 sulfur content in the extended tube ends for orbital welding.

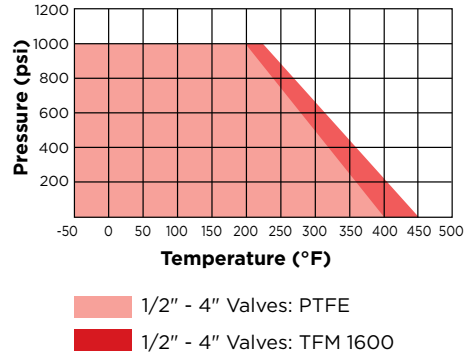

Valve stems are blow-out proof for maximum safety and comply with ASME B16.34.

All standard materials of construction comply with FDA requirements and all soft goods meet USP Class VI standards.
